EXECUTIVE SUMMARY**Introduction**

1. This is the 24th Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Limited for the “Contract No. KL/2010/02 – Kai Tak Development – Kai Tak Approach Channel (KTAC) and Kwun Tong Typhoon Shelter (KTTS) Improvement Works” (hereinafter called “the Project”). This report documents the findings of EM&A Works conducted in November 2013.

Water quality monitoring works

2. Water quality monitoring for Bioremediation works, but not limited to seabed preparation, the optimization trial, full-scale in-situ treatment and any additional injections during the post-treatment phase for the Project was performed in accordance with the Kai Tak Development Schedule 3 EM&A Manual and Particular Specification of Contract No. KL/2010/02 and the monitoring results were checked and reviewed.
3. Summary of the non-compliance of the reporting month is tabulated in Table I.

Table I Summary Table for Non-compliance Recorded in the Reporting Month

Parameter	No. of Exceedance		No. of Exceedance Due to the Project		Action Taken

Water Quality

4. Bioremediation works were conducted in November 2013. All water quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

1. INTRODUCTION

Background

- 1.1 The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares.
- 1.2 Civil Engineering and Development Department (CEDD) had completed an Environmental Impact Assessment (EIA) study for KTD under Agreement No. CE 35/2006(CE) Kai Tak Development Engineering Study cum Design and Construction of Advance Works – Investigation, Design and Construction (hereafter called “Schedule 3 EIA Report”). The Schedule 3 EIA Report was approved under Environmental Impact Assessment Ordinance (EIAO) in March 2009.
- 1.3 Penta-Ocean – Concentric – Alchmex Joint Venture (PCAJV) was awarded as the main contractor of the Contract No. KL/2010/02 – Kai Tak Development – Kai Tak Approach Channel (KTAC) and Kwun Tong Typhoon Shelter (Phase 1) (hereinafter referred to as the Project) and Cinotech Consultants Limited was commissioned by PCAJV to undertake the water quality monitoring for bioremediation works for the Project in accordance with EM&A Manual and Particular Specification.
- 1.4 According to the Particular Specification, Section 25 – Environmental Protection (PS25) and Environmental Monitoring and Audit Manual (EM&A Manual) for Kai Tak Development, Section 7.2.2, impact water quality monitoring for Bioremediation for the period from commencement of and throughout the duration of Bioremediation works, including but not limit to seabed preparation, the optimization trial, full-scale in-situ treatment and any additional injections during the post-treatment phase shall be conducted at the locations likely to be affected by bioremediation.
- 1.5 This is the 24th Monthly EM&A report summarizing the water quality monitoring works for bioremediation works for the Project in November 2013. The other EM&A information of Contract No. KL/2010/02 is presented in the Monthly EM&A Reports under Schedule 3 EIA (Contract No. KLN/2010/04).

2. WATER QUALITY MONITORING FOR BIOREMEDIATION

Monitoring Requirements

- 2.1 Marine water quality monitoring shall be carried out three times per week, at mid-flood and mid-ebb tides at the locations likely to be affected by bioremediation.
- 2.2 The interval between two sets of monitoring shall not be less than 36 hours except where there are exceedances of AL levels, in which case monitoring frequency shall be increased.
- 2.3 For all the monitoring stations, sampling should be taken at 3 water depths, namely 1m below the water surface, mid depth and 1m above the sea bed. For stations that are less than 3m in depth, only the mid depth sample should be taken. Shall the water depth is less than 6m, in which case the mid-depth station may be omitted.
- 2.4 At each monitoring station, duplicate samples shall be collected at each water depth. Sufficient volume of each water sample (not less than 1 litre) shall be collected for analysis to achieve the required detection limit.

Monitoring Locations

- 2.5 According to EM&A Manual, Section 7.2.2 and PS25, two monitoring locations in the vicinity of the works area (i.e. one 100m upstream and one 100m downstream of the works area) shall be selected as the impact monitoring stations. Three control stations shall also included for comparing the water quality from potentially impacted sites with the ambient water quality. The control stations shall be sited outside the area of influence of the works, as far as practical, not affected by any other works.
- 2.6 The indicative locations of water quality monitoring stations for bioremediation works which was approved by EPD on 30 November 2011 are shown on **Figure 1**. The coordinates of the water quality monitoring stations are presented in Table 2.1.

Table 2.1 Location for Marine Water Quality Monitoring Locations

Monitoring Stations	Coordinates	
	Easting	Northing
W1	838772.203	820413.345
W2	838741.308	820330.290
W3	838749.902	820278.615
W4	840663.244	818653.087
W5	840792.106	818435.346

- 2.7 No bioremediation works were conducted at the subzone no. 103 in the reporting month.

Monitoring Equipment

Dissolved Oxygen (DO) and Temperature Measuring Equipment

- 2.8 The instrument for measuring dissolved oxygen and temperature was portable and weatherproof complete with cable, sensor, comprehensive operation manuals and use DC power source. It was capable of measuring:
- a dissolved oxygen level in the range of 0-20 mg/L and 0-200% saturation; and
 - a temperature of 0-45 degree Celsius.
- 2.9 It has a membrane electrode with automatic temperature compensation complete with a cable.
- 2.10 Sufficient stocks of spare electrodes and cables were available for replacement where necessary.
- 2.11 Salinity compensation was built-in in the DO equipment.

Turbidity

- 2.12 Turbidity was measured *in situ* by the nephelometric method. The instrument was portable and weatherproof using a DC power source complete with cable, sensor and comprehensive operation manuals. The equipment was capable of measuring turbidity between 0-1000 NTU. The probe cable was not less than 25m in length. The meter was calibrated in order to establish the relationship between NTU units and the levels of suspended solids. The turbidity measurement was carried out on split water sample collected from the same depths of suspended solids samples.

Sampler

- 2.13 A water sampler, consisting of a transparent PVC or glass cylinder of a capacity of not less than two litres which can be effectively sealed with cups at both ends was used. The water sampler has a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler was at the selected water depth.

Water Depth Detector

- 2.14 A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

pH

- 2.15 The instrument was consisting of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It was readable to 0.1pH in a range

of 0 to 14. Standard buffer solutions of at least pH 7 and pH 10 were used for calibration of the instrument before and after use.

Salinity

- 2.16 A portable salinometer capable of recording salinity within the range of 0-40 ppt was used for salinity measurements.

Position System

- 2.17 A hand held differential Global Positioning System (GPS) was used during water quality monitoring to ensure the monitoring vessel is at the correct location before taking measurements. GPS was calibrated at checkpoint (Quarry Bay Survey Nail at Easting 840683.49 and Northing 816709.55) to ensure the monitoring station was at the correct position before taking measurement and water samples.

Sample Container and Storage

- 2.18 Following collection, water samples for laboratory analysis were stored in high density polythene bottles with appropriate preservatives added, packed in ice (cooled to 4°C without being frozen), delivered to the laboratory and analysed as soon as possible. Sufficient volume of samples was collected to achieve the detection limit.

Calibration of *In Situ* Instruments

- 2.19 All *in situ* monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or other international accreditation scheme before use, and subsequently re-calibrated at 3 monthly intervals throughout all stages of the water quality monitoring programme. Responses of sensors and electrodes were checked with certified standard solutions before each use. Wet bulb calibration for a DO meter was carried out before measurement at each monitoring event.
- 2.20 For the on site calibration of field equipment (Multi-parameter Water Quality System), the BS 1427:2009, "Guide to on-site test methods for the analysis of waters" was observed.
- 2.21 Sufficient stocks of spare parts were maintained for replacements when necessary. Backup monitoring equipment was also being made available so that monitoring can proceed uninterrupted even when some equipment was under maintenance, calibration, etc.
- 2.22 Table 2.2 summarizes the equipment used in the water quality monitoring program. Copies of the calibration certificates of the equipment are shown in **Appendix B**.

Monitoring Parameters

- 2.23 The monitoring parameters to be measured *in-situ* and in laboratory are summarized in Table 2.3.

Table 2.3 Water Quality Monitoring Parameters

In-situ Measurement	Laboratory Measurement
Dissolved Oxygen	Suspended Solids (SS)
pH	Nitrate-nitrogen (NO ₃ -N)

	Silver (Ag)
	Zinc (Zn)

- 2.24 Monitoring location/position, time, water depth, sampling depth, pH, salinity, DO saturation, water temperature, tidal stages, weather conditions and any special phenomena or work underway nearby were recorded.

Monitoring Frequency

- 2.25 Table 2.4 summarizes the monitoring parameters, monitoring period and frequencies of the water quality monitoring.

Table 2.4 Water Quality Monitoring Parameters and Frequency

2.26 The water quality monitoring schedule in the reporting period is provided in **Appendix C**.

Monitoring Methodology

2.27 The monitoring stations were accessed using survey boat to within 3 m by the guide of a hand-held Global Positioning System (GPS). The depth of the monitoring location was measured using depth meter in order to determine the sampling depths. Afterwards, the probes of the in-situ measurement equipment were lowered to the predetermined depths (1 m below water surface, mid-depth and 1 m above seabed) and the measurements were carried out accordingly. The in-situ measurements at predetermined depths were carried out in duplicate. In case the difference in the duplicate in-situ measurement results was larger than 25%, the third set of in-situ measurement would be carried out for result confirmation purpose.

2.28 Water sampler was lowered into the water to the required depths of sampling. Upon reaching the pre-determined depth, a messenger to activate the sampler was then released to travel down the wire. The water sample was sealed within the sampler before retrieving. At each station, water samples at three depths (1 m below water surface, mid-depth and 1 m above seabed) were collected accordingly. Water samples were stored in a cool box and kept at less than 4°C but without frozen and sent to the

laboratory as soon as possible. In addition, field information as described in Section 2.24 was also recorded.

Laboratory Analytical Methods

- 2.29 The testing of all parameters was conducted by Wellab Ltd. (HOKLAS Registration No.083) and comprehensive quality assurance and control procedures in place in order to ensure quality and consistency in results. The testing method, lowest detection limit and limit of reporting are provided in Table 2.5.

QA/QC Requirements

Decontamination Procedures

- 2.30 Water sampling equipment used during the course of the monitoring programme was decontaminated by manual washing and rinsed clean seawater/distilled water after each sampling event. All disposal equipment was discarded after sampling.

Sampling Management and Supervision

- 2.31 Water samples were dispatched to the testing laboratory for analysis as soon as possible after the sampling. All samples were stored in a cool box and kept at less than 4°C but without frozen. All water samples were handled under chain of custody protocols and relinquished to the laboratory representatives at locations specified by the laboratory.

Quality Control Measures for Sample Testing

2.32 The samples testing were performed by HOKLAS accredited laboratories. The following quality control programme was performed by the laboratories for each batch of samples:

- ✧ Method blank;
- ✧ Sample duplicate (at 5% level i.e. one for every 20 samples);
- ✧ Sample spike (at 5% level i.e. one for every 20 samples); and
- ✧ Quality control samples.

Results and Observation

2.33 The established Action/Limit Levels for the water quality monitoring works for bioremediation based on the baseline water quality monitoring results under Contract No. KLN/2009/10 is presented in **Appendix A**.

2.34 All water quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. The monitoring data and graphical presentations of water quality monitoring results are shown in **Appendix D and Appendix E** respectively.

2.35 The weather during the sampling at mid-ebb tide and mid-flood tide are presented in the following table:

Date	Weather Condition	
	Mid-Ebb	Mid-Flood
2 November 2013	Fine	Fine
5 November 2013	Cloudy	Cloudy
7 November 2013	Sunny	Sunny
9 November 2013	Sunny	Sunny
12 November 2013	Cloudy	Cloudy

23 November 2013	Sunny	Sunny
26 November 2013	Fine	Fine
28 November 2013	Sunny	Sunny
30 November 2013	Sunny	Sunny

2.36 No special phenomena near the monitoring stations were observed which might affect the monitoring results during the monitoring works.

- 2.37 The laboratory testing report and QC report are provided in **Appendix F and Appendix G respectively.**

Event and Action Plan

- 2.38 If there is Action / Limit Level exceedance in any parameters of the water quality, the actions in accordance with the Event and Action Plan as shown in **Appendix H** will be carried out.

Sample Description : 40 liquid samples as received by customer said to be water
Project No. : MA11017
Project Name : Contract No. KL/2010/02 Kai Tak Development – Kai Tak Approach Channel
 & Kwun Tong Typhoon Shelter Improvement Works (Phase 1)
Custody No. : MA11017/131102
Sampling Date : 2013-11-02

Test Requested & Methodology:

Item	Parameters	Ref. Method	Limit of Reporting
1	Suspended Solids (SS)	APHA 17ed 2540 D	*0.5 mg/L
2	Nitrate-nitrogen (NO ₃ -N)	In-house Method SOP056 (FIA)	*0.01 mg NO ₃ ⁻ -N/L
3	Cadmium (Cd)	In-house Method SOP 053 (ICP-ES) and SOP 076 (ICP-MS)	*0.1 µg/L
4	Chromium (Cr)		*0.2 µg/L
5	Copper (Cu)		*0.2 µg/L
6	Mercury (Hg)		*0.2 µg/L
7	Nickel (Ni)		*0.2 µg/L
8	Lead (Pb)		*0.2 µg/L
9	Silver (Ag)		*0.2 µg/L
10	Zinc (Zn)		*0.4 µg/L

Remark: 1) * Limit of Reporting is reported as Detection Limit
